

# CAN YOU HIT THE SHUTTLECOCKS?

LOOKING AT THE PICTURE, MAKING A SQUINT, YOU SHOULD BE ABLE TO HIT THE SHUTTLECOCKS. IF IT IS DIFFICULT OR PERHAPS IMPOSSIBLE, YOU MIGHT HAVE A DEFECTIVE BINOCULAR VISION.

Typical symptoms of a poor binocular vision could be headaches while reading, blurring of a text, tired eyes or difficulty in concentrating. In the meantime you can do something about it. 20 minutes of Visual Therapy pr day can relieve the symptoms.
